

Owners of apartments in Arenal Golf Segunda Fase.

25-02-2007

Concerning: Satellite dishes.

As decided on the first community meeting, the President and Vice president was requested to find a common solution of Dishes.

I have negotiated a solution with a small private company, that allows the community to keep control, and at the same time it is cheap for those owners who wants to receive Sky.

We (the community represented by the president, vice president and administration) recommend the attached offer, and this is the only offer the community accept.

Every block will get 1 dish mounted on the roof with a 32 port splitter and every participating Apartment will get a direct cable connection where the Sky box can be connected. The company takes care of installation and maintenance.

The price pr. apartment is 250,- €. At least 4 apartments in every block must participate. Block 8 and Block 10 already has at least 4 apartments, for the other blocks I recommend that you talk with your neighbours, or mail me.

For those who already has installed a dish, the company will give you an offer of buying the dish, price depend of course of its state.

Let me remind you, that the roof, external walls etc. are community property, and you are not allowed to mount dishes on community area. With the present offer you have the option of getting a cheap maintained sky connection, that are also legal.

In case you have any questions or comments, please do not hesitate to mail me (jan.iversen@satconsulting.com).

Best regards

Vice president.
